

Plumb-Bob Measuring on a curved surface

Use the plumb bob method for more accurate measuring.
 Reference: URL <http://en.wikipedia.org/wiki/Plumb-bob> **(RED AREAS)**

A plumb-bob or a plummet is a weight, usually with a pointed tip on the bottom, that is suspended from a string and used as a vertical reference. (Although a plumb-bob and line alone can only determine a vertical, if mounted on a suitable scale the instrument may also be used as an inclinometer to measure angles to the vertical)

RV Measuring instructions

Thank you for your interest in protecting your RV with the CalMark Protective Cover.

Measuring of larger RVs is most accurate when two people are involved. We like to use the old tailor rule "**Measure Twice, Cut once**". It is important that your measurements be as accurate as possible (don't add to them, we will make allowances during the manufacturing process for best fit) be sure and measure the longest point from front to rear of your RV. On some RV's there is curvature, measure out to the furthest point on the curve.

All covers include FSR (Fabric Stress Reinforcement) a zipper door, grommets placed strategically around the hems and tie-down straps to secure your cover to eliminate billowing. These features will extend the life of your cover for many years if properly used.

CalMark also manufactures many special application covers i.e. Utility trailers, Horse Trailers, Box Vans, Music Equipment Trailers, you name it and chances are we can make it. [Contact us](#) if you have a special application.

Calmark has been making protective covers for over 25 years. During that time we have tried every type of fabric available. The non-woven polypropylene fabrics (which we no longer offer) are subject to breakdown due to the UV in sunlight and while they are less expensive in the short term, they will not last more than a few months in most areas. The Sunbrella® fabric CalMark offers was developed by Glen Raven Mills in NC and CalMark guaranteed to last a minimum of 6 years in all weather conditions. Sunbrella® is a woven acrylic fiber material that is breathable, non-abrasive, and has the highest UV rating of all fabrics. You already have experienced Sunbrella® if you own a boat, have an awning, or have outdoor patio furniture.

Calmark has basic patterns for many types of RVs such as the Casita & Scamp trailer models and Roadtrek & Rialta motor homes. We will require you to fill out a measurement template (five or six dimensions) for most other models (Calmark will provide the template or it may be downloaded from our Web site www.calmarkcovers.com). **Please do not copy the dimensions from the manufacturers spec sheet, they are never correct.** It is our goal to provide you with the best fitting cover with a zipper door to provide easy access without removing the cover.

NOTE: SEE SPECIAL TEMPLATE FOR CURVED RV MEASUREMENTS (PLUMB-BOB)

We also have instructions available in regards to proper care and maintenance of your new CalMark cover. Contact us for tips on prolonging the life of your cover.
